Installation Instructions for the Company Database

Purpose

This document lists the files used and describes the steps taken to create the Company Database.

The order for running the scripts is

1. Run the create script (create_tables_company_database.sql): This step will remove any previous copies of the tables you might have had.
2. Execute the insert script (insert_data_company_database.sql): This step will delete any data from the tables and then insert the data.

List of Files in the Zip File

The following is the list of the files included in the downloaded zipped file:

FILE NAME	DESCRIPTION
create_tables_company_database.sql	A script that creates the tables.
insert_data_company_database.sql	A script that populates the company database tables.
installation instructions for the company database.pdf	This is the file you are currently reading that contains installation instructions.
The company database.pdf	This file graphically displays the company database.

You need to study the pdf document included (The company database.pdf). The file includes the graphic for the tables.

If you want to get back to the original set of data and you have not dropped any of the tables, you can just run the inserts script.
